

Tarea 12.

1 Obtener una gramática regular para $L(a^*b \cup b^*a)$.

2 La gramática regular dada por:

$$S \rightarrow bA \mid aB \mid \epsilon$$

$$A \rightarrow abaS$$

$$B \rightarrow babS$$

genera un lenguaje regular. Obtener una expresión regular para este lenguaje

1 $L = (\{\epsilon, a, aa, aaa, \dots\} \{b\} \cup \{\epsilon, b, bb, bbb, \dots\} \{a\})$

$$L = \{\{b, ab, aab, aaab, \dots\} \cup \{a, ab, abb, abbb, \dots\}\}$$

$$L = \{ab, abab, aababb, aaababbb, \dots\}$$

$$w = ab$$

$$S \rightarrow aA$$

$$S \rightarrow aA \rightarrow ab$$

$$S \rightarrow abA$$

$$w = aababb$$

$$S \rightarrow baS$$

$$S \Rightarrow aA \rightarrow aabS \rightarrow aababA \rightarrow aababbb$$

$$A \rightarrow aaS$$

$$A \rightarrow baS$$

$$A \rightarrow abS$$

$$A \rightarrow b$$

⑦

$L = \{\epsilon, baba, abab, babaaabab, ababb abab aba, \dots\}$

$$L = \{ab\}^* \cup \{ba\}^*$$
